SKILLS

- Java · Spring Boot
- Go
- Node.js
- Apache Kafka · RabbitMQ
- PostgreSQL · MongoDB
- Azure DevOps · AWS
- Docker · Kubernetes
- AI-Assisted Development

EDUCATION

- SOFTWARE ENGINEERING**
Uniamerica
2023 - 2024
- SYSTEMS ANALYSIS AND DEVELOPMENT**
Universidade Nove de Julho
2021 - 2023

SIDE PROJECT

- CREATOR & ENGINEER**
Makai - makai.com.br
Makai is a SaaS platform for water sports schools, supporting check-ins, subscriptions, team organization and financial management.
Own the architecture, backend, infrastructure and integrations, evolving the product from concept to production

SUMMARY

Senior Backend Software Engineer with an infrastructure background, focused on distributed systems, service and solution design, and production reliability. Experience modernizing services, optimizing data processing and delivering backend solutions, supported by AI-assisted development workflows.

EXPERIENCE

- CI&T — AB InBev Project**
Global technology services company. Project for a global beverage company, focused on backend services and distributed systems.
- SENIOR SOFTWARE ENGINEER** Jan 2026 - Present
 - Lead solution design for cross-service features, defining service responsibilities, integrations and end-to-end flows.
 - Drive product-level technical decisions across backend services, balancing maintainability, reliability and performance.
 - Create reusable agent skills and workflows with Cursor and Claude Code to support AI-assisted development.
- SOFTWARE ENGINEER** Aug 2024 - Jan 2026
 - Moved business logic into MongoDB aggregation pipelines, improving processing efficiency and reducing database and application resource use.
 - Built an internal streaming CSV library to resolve OutOfMemoryError failures and reduce memory consumption during file processing.
 - Automated data pipelines to replace manual operations.
 - Diagnosed and resolved critical production incidents through performance testing, observability and collaboration.
- Boavista Tecnologia**
Develops financial reconciliation software connecting payment providers, banks and ERP systems.
- JUNIOR SOFTWARE ENGINEER** Oct 2023 - Aug 2024
 - Built a payment-file processing module for a new card operator, improving file-processing performance.
 - Resolved memory leaks through stream processing to stabilize production workloads.
 - Migrated core endpoints from a JSF monolith to Spring Boot services, applying domain-driven design principles.
